OBJECTIVES

✓ The specific track:

It develops skills in the field of real-time computer graphics.
It consists of 3 subject fields: computing, communication & English, and a professional immersion.

✓ Specialisations:

They are composed of integrated courses and practical classes.
The internship and the directed study provide students with real-life professional situations enabling them to apply theoretical skills acquired at College and become familiar with the social and professional environment.

This may be based on an individual project or on an incoming mobility in the frame of a partnership with a foreign institution (bilateral agreements, Erasmus+ programme, etc.)

PRESENTATION OF THE ENGLISH TRACK

FIELD	MODULES	ECTS	LANGUAGE	NUMBER OF HOURS	WORKING TIME	TOTAL
Computing	Bases of object-oriented design	2	ENG	35	25	60
	Computer graphics	2	ENG	30	40	70
	Graphical interaction and animation	2	ENG	10	15	25
	Distributed programming	3	ENG	30	40	70
Communication	Intercultural communication	4	FR, ENG	50	40	90
	Working in English	2	ENG	30	20	50
Real-life professional situations	Directed projects	3	ENG		60	60
	Internship	12	ENG		10 weeks	
Total ECTS		30		185	240	425

✓ **Further details:** two courses are included in the communication field - image, creativity and communication, but also FLE/FLS (French as a Foreign or Second Language), which explains the importance of its coefficient.

STUDENT TESTIMONY

✓ SHAO Xinan, Chinese student enrolled in the DUT in Computer Science

'The training in computing is very interesting! The curriculum enables us to carry out numerous projects and thus quickly gain the skills to become a qualified computerist. The city is small but you can enjoy student life anyway. The university organises cultural activities which encourage encounters and exchanges.'
